

1-2 days workshop
max. 10 participants
on-site or off-site
Handouts and Reports

WORKSHOP

Learn from your data

You are already collecting lots of data but you are unsure how to utilise it? Get to know every aspect of your data - with Tableau.

Get your business ready for self-service BI with Tableau

Merging and interpreting your data just got easier! With the help of Tableau, you will be able to visualise your business data and keep an eye on factors of success and failure. The comprehensive visualisation via Tableau dashboards will allow all of your employees to monitor operating figures and gain valuable insights.

More than just a workshop – we will help you get started with self-service BI

You will learn everything about the application and effective handling of Tableau. COCUS will help you gain a keen comprehension of your data connections and help you understand which visualisations and dashboards make most sense in different scenarios. All on the basis of your own, relevant data.

In addition, you will be trained in Data Governance. We will be giving you an overview of guidelines and procedures to ensure data quality, data protection and data security.

Workshops tailored for your level

We make sure to get everyone on board. On demand we also offer joint elaboration of complex analysis such as:

- Combination of data sources and data coalescing
- Preparation of statistically recorded charts and visualisations
- Implementation of interactive dashboards

After the workshop you will have:

- an understanding of how to handle Tableau
- Visualisations, dashboards and charts for your day-to-day business
- new insights and conclusions about your data

Only those who know how to handle their data will be able to benefit from it – get to know the basics of Tableau with us!

What to expect

- introduction and features of Tableau, including terminology and an overview of possible applications
- Preparation of your data sources and set-up of primary data connections
- Analysis of your data including data processing, methods for data analysis and data visualisations
- Application and implementation of dashboards, visualisations and charts for further usage in your day-to-day business

COCUS offers various data-driven services: from setting-up the required infrastructures and databases up to data engineering and exciting data science insights with machine learning.
